This document is for the current team to leave details about what is the next goal for the civil discourse map.

Winter 2022 team tips for next group:
- Interviews will need to be added to the country pages on the map. We have tried react-player but that wasn't initially working. Give it another try but have another idea forming for how to implement them.
- The current Lambda-Eventbridge system is incredibly fast as far as run time (many operations running in parallel). Could cause eventBridge limit issues in the future. Consider doing clustered targets by inputting multiple counties in a string separated by a delimiter of your choice. Then loop though for the size of your groups/length of the array created by splitting the string.
- NewsAPI has a limit of 100 calls a day. Currently we are using roughly 34 a day. When you get near 100 countries you will need to make another account/lambda function to keep use free, or get premium access (this will need to be discussed with prof. Lowenstein)
- Global Disinformation Index has not responded since the beginning of our semester, be prepared to not have access to them or their data, and if you get back into communications with them… remember they don't like comparing one country to another, or as they put it NO NUMBERS. Have fun with that.
- Look into Google translate when you start to add non-english speaking countries to headlines.
